21st Century Cooperation

This edited volume explains the importance of regional public goods (RPGs) for sustainable development and shows why they are particularly important in the context of 21st-century international relations. By presenting a new and original data set and by presenting original essays by renowned scholars, this book lays the foundation for what will become an increasingly important focus for both economic development and international relations as well as for their intersection.

The volume contains four parts. The first introduces the core issues and concepts that are explored throughout the book as well as a new and original data set on RPGs. The second part further develops specific concepts important for understanding 21st-century RPGs: regional leadership, alliances, networks, and outcomes. The third examines how cooperation takes place worldwide for a range of important RPGs. Finally, the fourth part discusses how public goods are produced in specific regions, stressing that each region has a distinct context and that these contexts overlap in a decentered “multiplex” manner.

Global economic cooperation will be different in the 21st century, and this volume will be of interest to students and scholars of global governance, economic development, international political economy, sustainable development, and comparative regionalism.

4 Transnational policy networks and regional public goods in Latin America

Jacint Jordana

Introduction

Regionalism can take different forms. In recent decades, we have witnessed important waves of regionalism amid globalization across the world, but the drivers of these waves have been very different. In Europe, the main driver has been institutionalization and the establishment of formal rules (and often informal ones, too) to arrange the provision of regional public goods (RPGs). In South Asia, regionalism has moved forward thanks to economic integration, often privately driven. In Latin America, however, there has been no clear driver. For decades, the region has been characterized by constant failure in its attempts to advance institutionalization, as well as by weak advances in globalization.

In discussing this paper will argue that a particular and distinctive driver that is emerging in Latin America. The paper argues that in the region is socially shaped and is particularly myriads of nonhierarchical policy networks that are shaped throughout the region. As I will explain, regional integration has been firmly established on the rise of some level of economic integration to many successful processes of policy diffusion.

Регіоналізм може приймати різні форми. В останні десятиліття ми стали свідками важливих хвиль регіоналізму на тлі глобалізації в усьому світі, але драйвери цих хвиль були дуже різними. У Європі головний драйвер була інституціоналізація і встановлення формальних правил (і часто неформальні теж) для організації надання регіональних суспільних благ (РПГ). У Південній Азії регіоналізм просунувся вперед завдяки економічній інтеграції. Часто приватні. У Латинській Америці, однак, не було чіткого драйвера. Протягом десятиліть регіон характеризується постійними невдачами у своїх спробах просунути
